WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

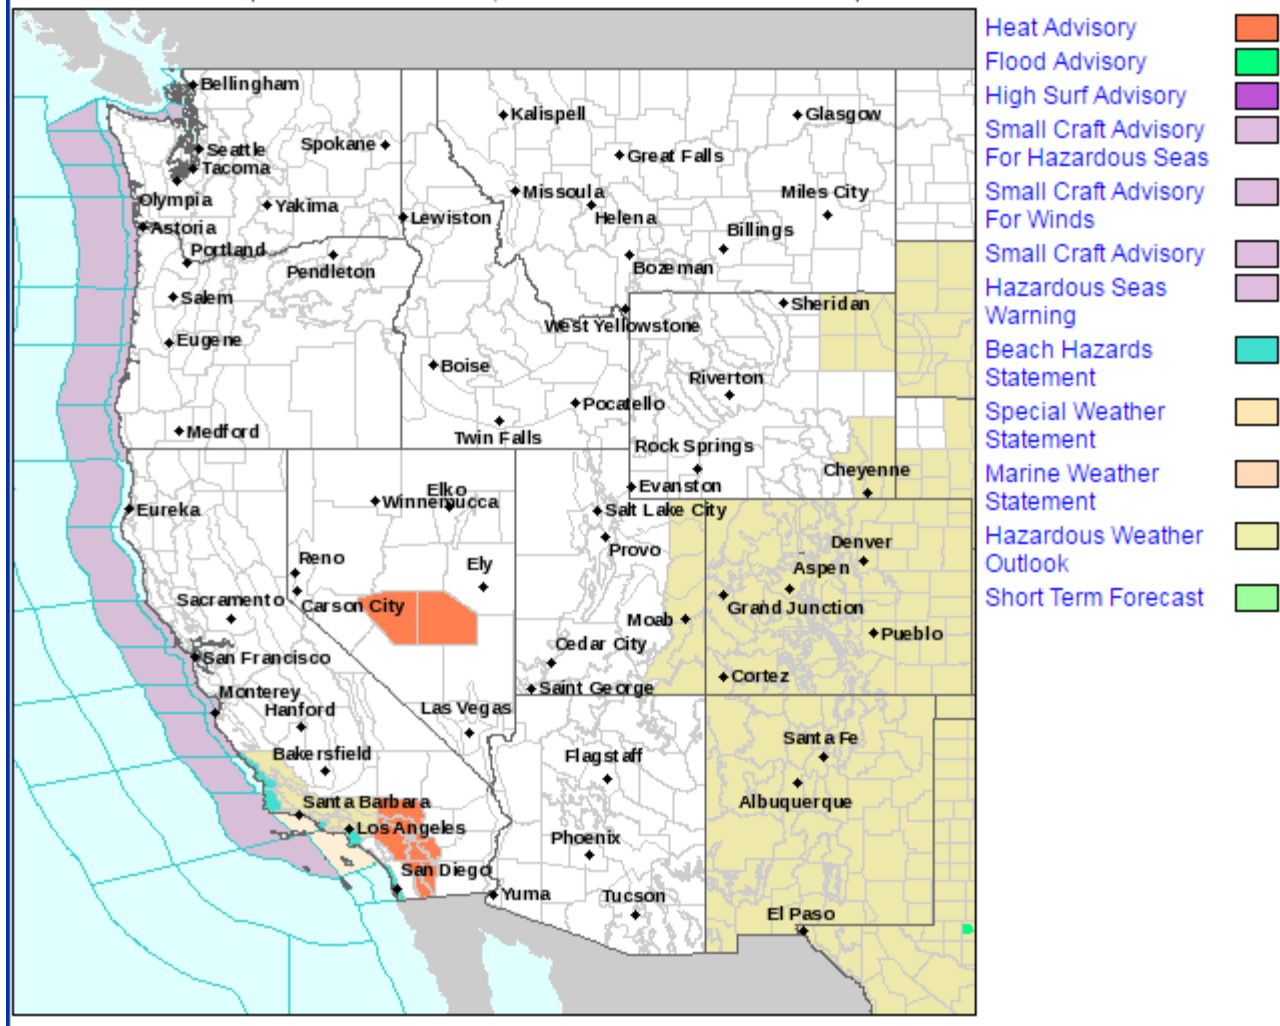

High pressure will build over the Great Basin and produce hot and dry weather throughout Northern California through Wednesday. Temperatures will be 5-10 degrees above normal and humidity will drop to 5-15% each afternoon. Diurnal slope winds will prevail in inland areas - downslope during nights and mornings and upslope in afternoons. These winds will reach 5-10 mph with gusts to 20-25 mph in wind-prone areas. Overnight humidity recovery will also be poor in many inland areas (to less than 40%). Late on Wednesday the high will begin to weaken as a low pressure trough begins to deepen offshore. Temperatures will cool a few degrees through Saturday and afternoon cumulus buildups can be expected over the higher peaks, especially in the north and east. Afternoon southwest winds east of the Cascade-Sierra crest will increase to 10-17 mph with gusts to 25-30 mph. At this time chances of thunderstorms are very slim, but subtle model changes can lead to a significant increase in thunderstorm chances. This pattern will be closely watched. High pressure will build back over the area next Sunday, leading to another increase in temperatures..

SOUTHERN CALIFORNIA

Strong high pressure centered over the Four Corners Area will cause temperatures to be 5 to 15 degrees above normal through Tuesday, with mid 80s to mid 90s across the mountains and mid 90s to 108 in the valleys. Minimum humidity will be mainly in the single digits and teens away from the coastal areas today and then increase to 12% to 25% Monday and Tuesday as some moisture moves in from the east. A disturbance in the easterly flow aloft will bring isolated afternoon thunderstorms to the mountains and deserts of Southern California east of the Cajon Pass Monday. The area of high pressure over the Four Corners Area will weaken and shift to the southeast bringing a slow cooling trend to the region Wednesday through the end of this week. Minimum humidity will drop back to the single digits and teens above and inland from the marine layer Wednesday through the end of this week as the flow aloft switches to the southwest. South to west afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes Friday and Saturday..
